English Course Catalog POSTGRADUATE MODULES (Master)

Prerequisites for postgraduate module attendance:

Bachelor's degree in Business Management/Economic Sciences or min. 4 semesters (2 years) and 180 ECTS credit points from previous studies respectively, ability to study in the language of instruction (min. B2 CEFR = Common European Framework of Reference for Languages). Eligibility for Master modules must first be checked – visiting students are not allowed to attend postgraduate modules without PRIOR confirmation by the IFO!

Winter semester 2017/2018

Module title	Semester	ECTS credits

1st semester - 2nd semester - 3rd semester - S = specialization 1st to 3rd term

Visiting students may combine language courses with Bachelor or Master modules, either basic or specialization subjects, from the different semesters of our degree programs. In most cases, the standard duration of our Bachelor programs is 6 semesters (1st to 2nd term = stage 1, 3rd to 5th term = stage 2, 6th term = practical project and thesis), of our Master programs 4 semesters (1st to 3rd term = general and key competences, specializations, 4th term = thesis). The academic year consists of one winter and one summer semester (lasting 6 months each, incl. semester break, lecture period per semester: ca. 14/15 weeks, examination period: 3 weeks).

For visiting students, the stated previous knowledge mainly has informative character. You do not have to prove these and you can start with the lectures right away. Exceptions are the language skills, the language courses and the Master modules. The module prerequisites shall just give you an impression what knowledge our local students usually are required to have and if the module is appropriate for you. Our teachers are entitled to dismiss students from their classes after the start of the lecture period if they realize that the student's previous knowledge from their point of view does not suffice for their modules.

No guarantee can be given that the modules at our faculty may not be altered, cancelled or otherwise amended on short notice. Schedule conflicts can sometimes not be avoided, either, since visiting students may choose subjects from different degree programs and semesters. Some modules require a minimum or maximum number of students resp. so that the students must be flexible enough to switch to alternative modules. Regular attendance of all classes is expected.

UNDERGRADUATE MODULES

Taught in English in the degree programs:

B.A. International Management B.A. International Business and Management B.A. Business and Management B.A. Applied Economics LL.B. Business Law

In alphabetical order (specializations at the end):

	Accounting
ECTS credits	5
Previous knowledge	Basic knowledge of accounting (bookkeeping, principles of commercial financial statements, principles of cost and activity accounting). No prior placement test required by visiting and dual degree students.
Module aims	The students get to know the legal and organisational principles of works cost accounting, concept of financial accounting in accordance with HGB and IFRS, balancing and valuation principles as well as international financial accounting.
	They are able to prepare individual and consolidated financial statements, including all annual financial statement components and items. Besides, they see the connection between fiscal and commercial-law assessments.
	The students get an introduction to the FI module of the SAP R/3 system (entering business transactions in the general ledger and subsidiary ledgers, preparing annual balance sheets and profit and loss accounts) for a case study.
Module content	 Legal and organizational principles of works cost accounting Concept of financial accounting in accordance with HGB and IFRS Balancing and valuation principles International financial accounting Preparing individual and consolidated financial statements, including all annual financial statement components and items Connection between fiscal and commercial-law assessments Introduction to the FI module of the SAP R/3 system (entering business transactions in the general ledger and subsidiary ledgers, preparing annual balance sheets and profit and loss accounts) for a case study
Module methods	Lectures, case studies, e-learning
Level	Undergraduate

Behavioral Economics and Behavioral Finance

ECTS credits

Previous knowledge Basic knowledge of economics

5

Module aims Students broaden their knowledge of economic and financial theory and become familiar with models of human behaviour that are more differentiated than the standard model.

They recognize to what extent behavioural economics and behavioural finance insights can complement and qualify textbook economic theory.

They are able to carry out economic analyses and economic policy evaluations with regard to behavioural economics and behavioural finance insight. They are in a better position to predict behavioural effects for the economy and financial markets. They are able to devise effective strategies and solutions to economic problems.

They can explain economic phenomena that appear paradoxical or irrational in a traditional perspective.

They are able to employ a richer toolbox of economic methods in order to arrive at more differentiated assessments of economic situations and problems.

Module content 1. Axioms of neoclassical economics (rational utility maximization): theory, critique and implications

- 2. Behavioral economics
 - 2.1 Qualifications of rationality: empirical evidence on irrational behaviour and alternative models and their applications
 - 2.2 Qualifications of independent preferences: herding and bandwagon effects, social comparison
 - 2.3 Qualifications of selfishness: fairness and commitment
- 3. Behavioral finance
 - 3.1 Traditional capital market theory: efficient capital markets, portfolio selection, capital asset pricing model (CAPM)
 - 3.2 Irrational behaviour of investors
 - 3.2.1 Cognitive restrictions
 - 3.2.2 Emotions and financial decisions
 - 3.2.3 Group dynamics and financial decisions
- **Module methods** Lectures, presentations, case studies, group work

Level Undergraduate

Block Week Event ECTS credits 2.5 **Previous knowledge** Depending on the topic of the particular block week event, not all events are open to visiting students Module aims Block seminars supplement the regular courses which take place. They last for one week and take place once in a semester. Regular courses are suspended during the block seminar week. During the block week topics/task are to be dealt with for which longer continuous work periods make sense, or are indeed required, and therefore cannot form part of the normal courses. Students gain an increased insight into national and also international topics/tasks related to practice. They broaden and deepen their knowledge about the conditions of practical business management. They are better able to assess the possibility of transferring theoretical knowledge to practical circumstances. They train their ability to analyze and work on situations with a highly practical relevance. They improve their interdisciplinary knowledge. They practice working in groups. They utilise presentation techniques. Module content In every semester there is a broad range of one-week seminars, projects, case studies, simulation games and excursions on offer. These are often suitable for any disciple but there are also subject or study program-specific options too. The topics/tasks have a particularly practical orientation. Students work on tasks related to interdisciplinary topics in small groups/teams, and prepare and present the result of these. Block seminars are offered in other languages as well as in German. In addition, guest lecturers from partner universities are regularly involved. Module methods Excursions, simulation games, case studies, projects, seminars Level Undergraduate

Business Mathematics

ECTS credits

5

- **Previous knowledge** Basic knowledge of mathematics (arithmetic, algebra, differential calculus). No prior placement test required by visiting and dual degree students.
- **Module aims** Students who successfully complete this module are able to handle economic functions analytically, offer solutions for economic extreme values with and without auxiliary condition with the assistance of differential calculus and set up linear equation systems based on economic issues.

Module content

1. Financial mathematics

- 1.1 Successions and series
- 1.2 Compound computation of interest
- 1.3 Annuity computation
- 1.4 Amortization computation
- 1.5 Leasing
- 2. Differential calculus I
 - 2.1 Introduction
 - 2.2 Determination of extreme values
 - 2.3 Economic applications
 - 2.3.1 Profit maximization
 - 2.3.2 Law of diminishing returns
 - 2.3.3 Least cost combination
 - 2.3.4 Production maximization
 - 2.3.5 Cost functions
 - 2.3.6 Economic order quantity
 - 2.4 Elasticities
- 3. Differential calculus II
 - 3.1 Partial derivatives
 - 3.2 Partial elasticities
 - 3.3 Homogeneity
 - 3.4 Cobb-Douglas production functions
 - 3.5 Restrictive extreme values
 - 3.5.1 Lagrangian method
 - 3.5.2 Economic applications
- 4. Linear algebra
 - 4.1 Linear system of equations
 - 4.2 Economic applications
 - 4.2.1 Markov chains
 - 4.2.2 Input-output analysis
 - 4.2.3 Multi-stage production processes
- 5. An aside: Linear optimization
 - 5.1 Setting the task
 - 5.2 Simplex algorithm
 - 5.3. A selected problem from discrete optimisation
- Module methods Lectures, exercises, self-study

Level

Undergraduate

Communication and Key Qualifications for International Students

Alternatively an academic writing seminar has to be attended to get familiar with the academic writing guidelines of our faculty. Further details will be communicated by the IFO.

ECTS credits 5 **Previous knowledge** Knowledge of MS Word, PowerPoint Module aims 1. Students who successfully complete this module are able to: · develop communicative key qualifications which are essential for work processes in the study program as well as career • compile information for academic work from libraries, academic databases and the internet within a reasonable time and to an appropriate depth. And they have basic knowledge and experience for the undertaking of academic tasks • analyze specific communication situations and to make decisions for target-orientated communication • deepen their communication skills in one of the following focal areas: argumentation/discussion, conducting discussions or presentation skills 2. Concerning argumentation/discussion: • Students are able to accumulate, prepare and organize arguments in such a way that they are able to represent their point of view convincingly in various talks and rounds of discussion. Additionally, they can influence the opinion-forming process with the aid of appropriate strategies, tactics and techniques. 3. Concerning conducting discussions: • Students are able to lead individual and group discussions in a targeted way. They consciously and constructively shape phases of the discussion and use argumentation and questioning techniques within this. 4. Concerning presentation: • Students are able to present information professionally and convincingly. They establish personal contact with the audience, develop meaningful dramaturgy and use selected rhetorical elements and visualisations to increase comprehensibility. • Students are able to implement knowledge from the foundations of communication in the above-mentioned focal areas, and also constructively utilise it in feedback rounds and discussions on presentations and practical exercises. Module content Key skills and their significance in the university and work context 1. Principles of scientific working and writing 2. 2.1 Information skills, researching literature in scientific databases 2.2 Demands on scientific work and formal aspects 2.3 Structure, work stages and methodology 3. Principles of interpersonal communication 3.1 Criteria of perception

3.2 Selected communication models and their significance at university, in everyday life and the world of work 3.3 The significance of non-verbal communication Principles of selected communicative skills 4. 4.1 Argumentation and discussion 4.2 Communication techniques 4.3 Giving presentations at university and in the world of work Module methods Seminars, exercises/training sessions, case examples, role plays, videosupported exercises, work in small groups, self-study, e-learning The learning concept involves further development of the confidence sphere - social competence, personality competence and methodology competence. Students will be inspired to become open for new things and to experiment with them. The students' activity forms the focal point of action-orientated project work. They will learn how to acquire information, to evaluate it, to handle it creatively and apply it in practice - as well as to reflect critically on the

Level Undergraduate

entire process.

Contract Law ECTS credits 5 Previous knowledge German contract law The students shall get a sound knowledge of the English contract law. Module aims They will be familiarized with the peculiarities of the English law system and know the differences to the German law system. They will be able to classify problems into the structure of the English contract law. They shall be enabled to analyze simple case constellations by using the leading cases and to find a solution for these. At the same time, they will acquire and deepen the contract law terminology in English. Module methods Lectures Module content The lecture contents are the classical components of a similar course at an English university: 1. Introduction Offer and acceptance 2. 3. Consideration 4. Intention to create legal relations, form 5. Terms 6. Mistake Misrepresentation 7. 8. Incapacity Duress, undue influence 9. 10. Illegality 11. Frustration 12. Breach and remedies 13. Third parties

Level

Undergraduate

	Econometrics
ECTS credits	5
Previous knowledge	Knowledge of software STATA, of statistics and of information management
Module aims	Applied business research is almost always empirical i.e. nearly always uses actual measurements/observations in order to investigate research questions. Econometrics is a key qualification in this context.
	Students shall know the most important econometric methods. They can apply econometric methods to issues of practical relevance and they can interpret and communicate results.
Module content	 Part I: Simple linear regression model 1. Valuation with the method of the smallest squares 2. The quality of the valuation 3. Interval valuator 4. Hypotheses tests 5. Prognosis
	Part II: Multiple linear regression model 1. Valuation 2. The quality of valuation 3. Hypotheses tests 4. Prognosis 5. Presentation of valuation outcome
	 Part III: Econometric problems with economic-empirical practice 1. Selection of variables 2. Normally distributed disturbance variables 3. Multi-collinearity 4. Heteroscedasticity 5. Autocorrelation 6. Univariate time series models 7. Dynamic model equations
Module methods	Lectures, seminars, case studies
	Lie de sur de sta

Level Undergraduate

Economic Policy		
ECTS credits	5	
Previous knowledge	Knowledge of modules Principles of Economics and European Integration, basic knowledge of descriptive statistics	
Module aims	 The aim of the Economic Policy module is to enable students to: justify the necessity of economic policy dealings in the social market economy deepen their knowledge of goals and goal conflicts in economic policy, and connecting factors of economic influence through legitimised instances of this reflect critically on theoretical arguments for the justification of economic policy measures in the following areas of activity: allocation, distribution and stabilisation to present economic policy connections in a clearly structured manner to assess the appropriateness of solutions for the achievement of economic policy goals on the basis of acquired knowledge 	
Module content	 Principles Sphere of activities of economic policy in the market economy Objectives, means and bearers as the object of a theory of economic policy Allocation Correction of market performance Collective decision-making by ballot Distribution Functional and personal income distribution Redistribution policies using selected examples Stabilization Economic policy concepts Selected policy areas: monetary, fiscal and growth policy 	
Module methods	Lectures, exercises, self-study, case studies, seminar papers	
Level	Undergraduate	

European Integration		
ECTS credits	5	
Previous knowledge	Basic principles of economics	
Module aims	The principle aim is for students to get to know and understand the theoretical and institutional foundation of the European Union. With the insight gained they should be in a position to order and assess proposals for reform and change in selected areas of politics of the European Union.	
Module content	 Basic principles of the European Union History of European Integration Laws and institutions of the European Union Decision-making structures and processes Financial constitution of the European Union Common market and basic freedoms Common Agricultural Policy European Cohesion Policy Competition policy in Europe Monetary policy and European monetary system Fiscal policy in the European Union Future of the European Union 	
Module methods	Seminaristic course with integrated case-studies	
Level	Undergraduate	

European Law and Taxation Issues

ECTS credits 5 – The module consists of two components which have to be attended both to get full 5 ECTS credits at the end of the semester.

Previous knowledge Not defined

Module aims Students who have successfully studied this module have a broad and integrated knowledge of the system of the European Union, in particular the European Community. They understand how European law affects the conduct of companies and member states, municipalities and other governmental bodies in economic matters. In particular, students understand and are able to apply the fundamental freedoms of the internal market and command a knowledge of European competition law and legally relevant issues of social, consumer and environmental policy. They are able to communicate these issues to employees and superiors within their work environment after graduation.

Module content European Law:

- 1. Historical development of the European integration
- 2. Institutional framework of the European communities
- 3. Budget of the European communities
- European legal framework (primary and secondary law, fundamental rights, relationship between national and European law, principles of conferral and proportionality, flexibilization, legal protection by the ECJ
- 5. Fundamental freedoms of the EC treaty
 - 5.1 Free movement of goods
 - 5.2 Free movement of workers
 - 5.3 Right of establishment
 - 5.4 Services
 - 5.5 Capital and payments
 - 5.6 General prohibition of discrimination
- 6. Competences of the EC and their implementation
 - 6.1 Common agricultural policy
 - 6.2 Competition rules
 - 6.3 Approximation of laws and European Law of Companies
 - 6.4 Taxes
 - 6.5 Economic and monetary policy
 - 6.6 Common trade policy and development cooperation
 - 6.7 Protection of the environment
 - 6.8 Common transport policy/trans-European networks
 - 6.9 Consumer protection
 - 6.10 Social policy and employment
 - 6.11 Economic and social cohesion
 - 6.12 Education and culture
 - 6.13 Common research policy
 - 6.14 Visa and immigration policy
- 7. Police and judicial cooperation in criminal matters
- 8. Common foreign and security policy

Taxation Issues:

- 1.1 Basic principles of finance and the concept of taxation
- 1b Concept of taxes
- 1c Effect of taxes on state and company decisions
- 2a Overview of the German tax system, fiscal law of procedure
- 2b Division of taxes, legal foundations
- 3 Basic principles of income tax
- 3a Objective and personal liability to tax
- 3b Profit income
- 3c Basic principles of tax accounts and auditing
- 3d Determination of net income; cash accounting
- 3f Ascertainment of taxes owed
- 4 Basic principles of the taxation of limited companies (corporation tax)
- 5 Basic principles of trade tax
- 6 Basic principles of sales taxes (value added tax)

Module methods Seminar-type course with integrated case-studies. Practice-related seminar-type class by means of interactive elaboration of questions and practice cases, slides, cases from practice

Level Undergraduate

Financial Association		
Financial Accounting		
ECTS credits	5	
Previous knowledge	Basic knowledge of accounting (bookkeeping, principles of commercial financial statements, principles of cost and activity accounting). No prior placement test required by visiting and dual degree students.	
Module aims	Financial statements report on the financial position and on the ability of generating income and cash flow of a business. The course covers the preparation of financial statements along IFRSs. Students learn to analyze companies based on the financial statements provided for external purposes. The class covers all important items of financial statements. The course meets the international requirements of Financial Accounting.	
Module content	 Financial statements along IFRS Financial statement analysis Statement of financial position Long-term assets (acquisition, depreciation, revaluation) Group accounting Inventories Cash, A/R Statement of cash flows Equity Statement of comprehensive income Statement of changes in equity Current liabilities Long-term liabilities Kotes Risk management 	
Module methods	Lectures, tasks, assignments	

Level Undergraduate

	Financial Management	
ECTS credits	5	
Previous knowledge	Basic knowledge of mathematics (intermediate level)	
Module aims	The aim of the financial management module is to enable students to:	
	 acquire broad knowledge about various forms of financing and the possibilities for assessment of investments. They know the common key figures of financial analyses and know about the significance of a rating. understand and evaluate the differences between various forms of financing. They critically deal with various methods of investment accounting. They recognize that the situation of a company can be analyzed by means of key figures. analyze the success and liquidity situation of companies or authorities by means of key figures. They are able to carry out and assess the rating of a company. Students are able to apply investment accounting procedures. present the results verbally and also highlight the significance of these. recognize, understand and analyze a company or authority's financial decision-making processes in a simplified case study. 	
Module content	 decision-making processes in a simplified case study. 1. Basic principles 1.1 Aims and tasks of the finance sector 2 Definition of investment and financing 1.3 Systematization of financing 1.4 Systematization of investments 2. Corporate analysis Purpose and sequence of the analysis Success and profitability analysis Case studies Rating Basic principles of investment accounting 1 Overview of different methods Success and profitability financing I Legal forms and equity financing Equity financing in the PLC A.2 Raising of capital Equity financing in the corporate cycle 	

	 5. Credit financing 5.1 Forms of short-term credit financing 5.1.1 Securitized forms 5.1.2 Non-certificate forms 5.2 Forms of long-term credit financing 5.2.1 Securitized forms 5.2.2 Non-certificate forms 5.3 Special forms of financing (factoring and leasing) 5.4 Intermediate forms of financing (hybrid instruments) 5.5 Creditworthiness and security 5.6 Digression: Current financial market crisis
Module methods	Lectures, work on tasks in small groups, presentation of the case studies
Level	Undergraduate

the group work,

Human Resource Management and Legal Systems

ECTS credits 5 – The module consists of two components which have to be attended both to get full 5 ECTS credits at the end of the semester.

Previous knowledge Legal systems: basic understanding of private law

Module aims Human Resource Management: Students describe the various fundamental areas of human resource management and make correlations between them. They know about recruitment methods and selection of employees, and choose appropriate means of filling vacant positions, for example. They describe a systematic recruitment process. Students describe basic theories of motivation and human resources • management, and use these to interpret cases of operational practice. Students distinguish various forms of remuneration and provide • examples for possible areas of application. Students interpret various key figures used in human resources • controlling. Students select appropriate methods for making adjustments to • staffing. Legal Systems: Students are aware of the fact that international business has to take into account different legal systems and traditions. They have a basic understanding of the differences between civil law • and common law systems. They are able to identify the relevant rules on the conflict of laws and • determine the applicable law. They have a basic understanding of the legal mechanisms used to • facilitate cross-border transactions such as choice-of-law-clauses and international arbitration. Module content Human Resource Management 1. Basic concepts in human resource management Determination of manpower 2. 3. Recruiting and employee selection Human resource development 4. 5. Principles of motivation 6. Principles of leadership Payment systems in companies 7. 8. Human resources controlling and adjustment

Legal Systems

- 1. Different legal systems: common law and civil law
 - 1.1 Outline of civil law principles
 - 1.2 Outline of common law principles
- 2. Differences between legal systems using examples from German and US business law
 - 2.1 Conclusion of contracts
 - 2.2 Liability
 - 2.3 Other specific legal issues

- 3. Law of conflicts
 - 3.1 Determination of the applicable law
 - 3.2 Choice of law-clauses
- 4. International litigation and arbitration
- Module methods Lectures, case exercises and case studies, group work Legal systems: Lectures, case studies, self-study

Information Management		
ECTS credits	5	
Previous knowledge	Computer essentials (e. g. according to ECDL/ICDL)	
Module aims	Driven by the trend of digitization, companies across industries are transforming their business processes by use of modern information systems und information technology. Therefore, this course introduces the field of information management to students of business sciences. Based upon the conceptual foundations of information systems, special emphasis is placed on the problem-oriented usage of state-of-the-art software products essential for business management across the value chain of modern companies.	
	Students have knowledge about the application of information systems at operational level.	
	They identify the application domains of information systems to design structural and workflow organisation.	
	The students are qualified to solve business problems by use of spreadsheet applications and are able to cover business information demand using a relational database management system.	
	They are able to evaluate the benefits and potentials of information systems at operational level.	
	They design spreadsheets to tackle business problems and master the basic commands of relational database management systems.	
Module content	 The role of information systems in business: definition, structure and types of information systems in business domains. Fundamentals of information technology: overview of the logical, mathematical and technical foundations of computer systems and networking. 	
	 End user computing: techniques of personal information management and spreadsheet applications to solve business problems. Data management: conceptual data modeling and usage of relational database management systems to cover business information demand. Process management: introduction to notations and software tools appropriate for modelling business processes. 	
Module methods	Lectures, case studies, hands-on training and exercises in the use of state-of-the-art software products.	
Level	Undergraduate	

Logistics, Procurement and Production

ECTS credits

5

Previous knowledge Knowledge of the module Principles of Business Management

Module aims The module imparts students with a detailed overview of the valueadded process in the core business functions of procurement, production and logistics. This includes the teaching of the processes, strategies, structures and systems in the process chain from the supplier through the producer to the direct customer. On the basis of the knowledge acquired in the module Principles of Business Management, the main tasks and objectives of these three core functions as well as their overlaps and delimitations are further deepened.

The students have a broad general knowledge in the area of logistics, procurement and production. They know the core statements of the current theories, concepts and methods in these areas and they are aware of the (further) development and the change of knowledge and understanding.

They understand the difference and meaning between declarations based on evidence and / or empirical research and other forms of explanation and evaluate the concepts, methods, and processes and systems used in the value chain according to the origin of their statement.

The students use the imparted concepts and methods, in order to design, plan, execute and control structures and processes along the value chain.

They use concepts, procedures and methods from the fields of logistics, procurement and production in order to comprehensibly formulate tasks, problems and optimization potentials from these areas and to present and evaluate them in a well-structured and coherent form to different groups of persons.

They are able to master current professional competences, skills and techniques from the fields of logistics, procurement and production and deal with appropriate materials and methods in a professional manner.

- Module content1. Presentation of the value chain and introduction of the core functions procurement, production and marketing, classification of the logistics into the value chain
 - 2. Definition and tasks of procurement, production and logistics, presentation of the fundamental logistics concepts
 - 3. Production and logistics systems: structures and processes on the network level; Depicting the different levels of a production- and logistics network (network level, plant / factory, area / department, workplace group / line, workplace / cell)
 - 4. Introduction to Logistics Management: function-specific division of logistics into the tasks of order processing, packaging, transport, inventory management, warehousing (storage and order picking)
 - 5. Introduction to Logistics Management: phase-specific division of logistics into the phases of procurement logistics, production logistics, distribution logistics and disposal logistics

- Introduction to procurement management (procurement objects, tasks and objectives, sourcing concepts), procurement processes, supplier management
 - 7. Introduction to production management: classification of production processes, production objectives, decision levels in production management, production program planning, supply planning, production execution planning and production control
- Module methods Lectures with group work

	Macroeconomic Theory and Policy
ECTS credits	5
Previous knowledge	Microeconomic Theory and Policy Math
Module aims	Students who have successfully studied this module know the central macroeconomic questions associated with the supply of goods, production and the labour market as well as the economic policy instrument and target system.
	They have the knowledge to identify relevant causes of macroeconomic imbalances and to assess the possibilities and limits of state interventions.
	The students are able, to some extent, to assess economic policy proposals theory-based.
	They can process economic questions and to present them to third persons in an appropriate manner.
	They are able to use their available economic tools for solutions and to develop case-related approaches on their own.
Module content	 Introduction Goods market, production function, labor market Keynesian Cross ASAD- or ISLM-Model Fiscal and monetary policies in theory Fiscal and monetary policies in practice Basic evils: Inflation, deflation and unemployment
Module methods	Lecture with exercises, self-study
Level	Undergraduate

Management Concepts		
ECTS credits	5	
Previous knowledge	Management Tools or a similar introductory course to Strategic Management, sound knowledge of the various functions within organizations and of micro- and macroeconomics	
	 Students who successfully complete this module are able to appreciate management concepts for implementing strategic choices and ensuring the long-term success of organizations. relate the discussed management concepts to other strands of management literature. reflect on the opportunities and pitfalls of management concepts in today's business world. explain the development of and rational for the discussed management concepts. identify constraints for applying management concepts in various business contexts. understand the meaning of quality from the Japanese point of view. explain the main steps in applying management concepts, like just-in-time (JIT) in organizations. identify problems in change, project, innovation and process management and address them. identify the key differences between JIT and other traditional approaches to inventory management. identify the key differences between JIT and other traditional approaches to inventory management concepts to implement strategic choices. recognize constraints for applying management concepts to implement strategic choices. recognize constraints for applying management concepts in business reality and know how to address them. increase their personal effectiveness by selecting and employing management techniques and tools, like, for example, forcefield analysis in change processes, process mapping and creativity techniques in innovation management. explain precisely the rationale, functionality and benefits of the discussed management concepts to various stakeholders. management and contribute to change management processes and other singlementation of management concepts for managing the inplementation of management concepts to various stakeholders. 	
Module content	 Management concepts/philosophies, including but not limited to: Strategic organizational design Change management Project management Innovation management 	

- Process management
- Lean management
- Just-in-time
- Quality management
- Benchmarking
- Supply chain management
- **Module methods** Lectures, illustrations/case studies, classroom discussions, videos, interactive exercises, topical readings, assignments, group work

Management Tools	
ECTS credits	5
	Sound knowledge in primary and secondary activities of the value chain
Module aims	Students should be able to:
	 present tools to design a strategy and to develop business organisations strategically interpret alternative tools to make a choice outline consequences of strategic decisions apply tools to implement a strategic development successfully identify and interpret strategic issues in different contexts realise how strategy development can be seen, how processes can be understood and what the implications are for strategy development differentiate between strategic management in different contexts apply techniques of strategic analysis apply techniques to select adequate strategies and implement strategy use different viewpoints on strategy to explain observable processes in organisations explain implications of different scenarios and different strategies demonstrate the impact of national and organisational culture on strategy formulation and implementation apply techniques in specific business positions
Module content	 Part I: Introduction 1. Terms: Understanding each other 2. Overall View: Understanding strategy development 3. The linkage: tools and concepts Part II: Analysis: The Strategic Position 4. Concepts: JIT, quality, benchmarking, value chain, SCM 5. Tools to define the environment 6. Tools to identify the strategic capability 7. Tools to reveal expectations and purposes Part III: Alternatives: Strategic Choices 8. Concepts: growth, globalization, mergers, acquisitions and alliances 9. Tools at corporate level 10. Tools at business level 11. Tools to choose directions and methods of development Part IV: Implementation: Strategy into Action 12. Concepts: project management, strategy in the new millennium 13. Tools to manage strategic change
Module methods	Lectures, illustrations/case studies, video, self-study, coaching, e-learning, e-monitoring, group work, presentations, round table discussions
Level	Undergraduate

Management Tools and Communication and Key Qualifications

ECTS credits	5
Previous knowledge	Sound knowledge of primary and secondary activities of the value chain, typically from foundation/introductory business classes.
Module aims	 Students who successfully complete this module are able to apply tools to design a strategy and to develop organizations strategically. interpret alternative options to make a decision. outline consequences of strategic decisions. define a research question in the field of management research by narrowing down a topic. compose a basic scientific research paper. conduct scientific research by applying various methods and drawing on multiple sources.
	 They are able to discuss and reflect on the impacts strategic decisions may have on organizations. identify constraints and interdependencies of strategic decisions and address them. identify and interpret strategic issues in different contexts. realize possible implications for strategy development. differentiate between strategic management in different contexts. distinguish and appreciate different forms of academic resources (e. g. books, journals, newspapers, online resources, etc). develop and hold presentations for an academic audience. understand the difference between team roles and tasks as well as group dynamics comply with basic teamwork rules and appreciate them as an effective means to manage teams.
	 The students can apply techniques of strategic analysis. apply techniques to select adequate strategies. apply techniques to implement strategy.
	 They are able to elaborate on strategic choices and argue in favor of a certain strategic positioning. use different viewpoints on strategy to explain observable processes in organizations. explain implications of different scenarios and different strategies. present a complex management topic according to the needs of the audience. evaluate and reflect on advantages and disadvantages of management tools and concepts and their application in business reality. defend an opinion/conclusion vis-a-vis a critical audience. initiate a critical discussion with an informed audience. communicate effectively within team structures so that problems and challenges can be addressed in a timely manner.

The students can

- apply various management tools and techniques in specific business contexts.
- demonstrate an ability to deal with unfamiliar strategic management problems in a variety of contexts.
- structure complex strategic management problems.
- identify the interdependencies and relations between the management tools and elaborate on their theoretical foundations.
- communicate the merit of applying management tools to critical audiences.

Module content Part I: Introduction

- 1. Terms: Understanding each other
- 2. Overall View: Understanding strategy development
- 3. The linkage: tools and concepts

Part II: Strategic position

- 4. Tools to analyze the environment
- 5. Tools to identify strategic capabilities and analyze value chain activities
- 6. Tools to reveal stakeholder expectations and develop organizational purpose
- 7. Tools to understand cultural and historic constraints

Part III: Strategic choices

- 8. Tools at the business level (competitive strategies)
- 9. Tools at the corporate level
- 10. International strategy tools
- 11. Innovation management tools and entrepreneurship
- 12. Mergers, acquisitions and alliances

Part IV: Strategy into action

13. Measuring and monitoring strategy effectiveness

Part V: Key Qualifications

- 14. Introduction to scientific research methods
- 15. Writing scientific papers and assignments
- 16. Composing a concise literature review
- 17. Definition of adequate research questions
- 18. Visualizing scientific findings and results
- 19. Presentation and communication skills
- 20. Using nonverbal communication
- 21. Working and collaborating in teams
- **Module methods** Lectures, illustrations/case studies, classroom discussions, videos, interactive exercises, topical readings, assignments, group work

	Marketing
ECTS credits	5
Previous knowledge	Not defined
Module aims	To safeguard a sustainable competitiveness of companies, to cultivate markets and to gain customer's loyalty, marketing has a central meaning. For the implementation of a consistent market orientation all processes in the context of marketing management must be created and coordinated as well as possible.
	Students who have studied this module have a broad fundamental knowledge of marketing. They know the current theories, methods, design principles, and optimization approaches they indicate important developments and requirements.
	They understand and interpret relevant marketing subjects and decisions in consideration of strategic and operative aspects as well as their interdependencies.
	The students use certain theories and methods for the design and optimization of marketing processes and for the decision making.
	They know the specific vocabulary in marketing and can use it in the respective situation.
	They recognize, grasp and analyse in case studies complex relationships and develop specific solutions.
Module content	 General basics of marketing Relevant theories and methods Marketing planning and processes – requirements and design principles Strategic and operative marketing Marketing controlling Exercises for the transfer of practical experience
Module methods	Lectures, exercises, case studies, presentations
Level	Undergraduate

	Microeconomic Theory and Policy
ECTS credits	5
Previous knowledge	Mathematics (from school)
Module aims	Students who have successfully studied this module know the central microeconomic questions associated with the supply of goods and the economic policy target system.
	They are able to recognize strengths and weaknesses of the market allocation and to assess state interventions in the market process on the basis of welfare-theoretical facts.
	They also know, to some extent, how to assess economic policy proposals theory-based.
	The students are able to process economic questions and to present them to third persons in an appropriate manner.
	They can use their available economic tool for solutions and to develop case-related approaches on their own.
Module content	 Introduction Consumer economics Producer economics Perfect and imperfect competition State interventions Introduction: new institutional economics Introduction: game theory
Module methods	Lecture with exercises, self-study
Level	Undergraduate

Principles of Business Management

ECTS credits

Previous knowledge Not defined

5

Module aims Students will be familiarised with the foundations of business management, administration and scientific tools and methods with approaches. Students will be able to identify the success factors of business management in relation to the value chain. The students will be able to identify different business formats and organizational combinations with the help of case studies.

Students who successfully complete this module can define basic terms of business administration and describe the concepts of business administration in relation to value added process.

They can-review the differences and similarities of different business combinations and the advantages and disadvantages of different business combinations.

The students can identify the different business formats and combinations and discuss them in relation to international environments on an academic level. They can examine the impact of globalization in relation to strategy and the business enterprise.

Module content

- Fundamentals of business
 - 2. Global business
 - 3. Small business enterprise
 - 4. Medium to large business structures
 - 5. Business combinations
 - 6. Role of management
 - 7. Teams and management
 - 8. Human resource management
 - 9. Business ethics
 - 10 Business strategy
 - 11. Financial markets
 - 12. Production management

Module methods Lectures, reading material, case studies, video, round-table discussions

Statistics

ECTS credits

Previous knowledge Knowledge of arithmetics

5

Module aims The students know the different methods to prepare and to present static data. They are able to understand and to interpret diagrams, tables, frequency distributions, statistical measures und indexes. The students know the differences between one-dimensional and two-dimensional features. The students are able to carry out independently a statistical study in a company. They can prepare the results graphically and in table form and interpret it comprehensively. Finally they can analyse the basic material and can transform the results into understandable reports. They can verify hypotheses.

The students

- carry out data collections
- can differentiate characteristics by the scale
- know how the absolute and the relative frequencies are defined and can draw up frequency tables
- · can calculate statistical measures and indexes
- can carry out a simple regression analysis
- can calculate key figures
- can recognize a time series and calculate the most important parameters
- can verify hypothesis with statistical methods of testing
- can estimate parameters
- can calculate simple key figures by means of statistic software

The students learn how to use data. They can evaluate data and they can interpret and communicate the results. They are able to verify hypotheses and to estimate parameters.

They are able to justify their decisions by means of statistical methods and analysis.

- Module content 1. Principles
 - . Principies
 - 1.1 Data classification
 - 1.2 Data collection
 - 2. One-dimensional features
 - 2.1 Distributions and their graphic representation
 - 2.2 Key figures
 - 2.3 Economic applications
 - 3. Two-dimensional features & regression analysis
 - 3.1 Contingency tables
 - 3.2 Association dimensions
 - 3.3 Regression analysis
 - 3.4 Economic applications
 - 4. Measurements and index values
 - 4.1 Measurements
 - 4.2 Index values
 - 4.3 Economic applications

- 5. Elementary time series analysis
 - 5.1 Trend determination
 - 5.2 Estimation of components
 - 5.3 Economic applications
- 6. Random variables and distributions
- 7. Estimation and testing procedures
 - 7.1 Point and interval estimations
 - 7.2 Testing procedures
 - 7.3 Economic applications
- 8. Analysis of economic data using statistics software
 - 8.1 Introduction to statistics software
 - 8.2 Computer-aided graphic representation of data
 - 8.3 Computer-aided statistical computation

Module methods Lectures, exercises, case studies, self-study, e-learning

S Advanced Business Conversation/Negotiation in English (CEFR C1/C2)

ECTS credits

5

- **Previous knowledge** Unless English is your mother tongue: Appropriate level will be ascertained by language certificate (completed C1 CEFR level or equivalent knowledge) or online placement test at start of semester (admission to English 5), alternatively completion of preceding module English 4/CEFR B2/C1 of our faculty.
- **Module aims** A good command of the terminology of business management and economics. Knowledge of the current social and economic development of the target language countries. Comprehension of authentic business texts. Secure production of own texts and seminar papers on the abovementioned topics, project work. Mastering language structures when communicating about subject-specific contents. Sensibility for intercultural differences.
- Module content
 1. Research, reading, analysis and discussion of selected topics on business and economic-political topics based on authentic articles from textbooks and the English business and economic press relating to basic affairs and events of everyday politics
 - 2. Fundamental principles and practice of the conduct of negotiations in an international and intercultural context
 - 3. Case studies, simulations and project work on topics of international and intercultural management
 - 4. Consolidation of topics in seminar papers, discussions, project work and negotiations
 - 5. Consolidation of the terminology of business management, economics and international management
 - 6. Exemplary consolidation of grammar, syntax and communicative skills
- **Module methods** Seminar-type lectures, group, partner and individual work, discussions, presentations, project work, self-study
- Level Undergraduate

S Corporate Finance		
ECTS credits	5	
	Principles of financial management, basic knowledge of mathematics	
	and statistics (upper school level), principles of accounting	
Module aims	Students dispose of theoretical and practical knowledge in the sectors finance, risk, liquidity and rating. They are able to use this knowledge with methodical instruments and analytical and communicative competencies.	
Module content	Part 1: Finance, financial markets und objectives 1. The role of financial management 2. Objectives of the CFO 3. Financial markets 4. Corporate Governance	
	Part 2: Cash-Flow-Management 1. Definition of Liquidity 2. Derivation of cash flows 3. Importance of liquidity	
	 Part 3: Risks and Return 1. Risk dimension 2. Relationship between Risk and Return 3. Measuring the Cost of Equity 4. Measuring the Cost of Debt (Credit Risk, Rating) 5. The Weighted-Average Cost of Capital 	
	Part 4: Shareholder Value and Valuation 1. Concept of present values 2. Valuing long-lived assets 3. Valuing of financial assets (stocks, bonds)	
	Part 5: Optimal Capital Structure 1. Meaning of equity and debt 2. Leverage effect 3. Tax issues 4. Rating influences	
	Part 6: Financing 1. Internal versus external finance 2. Equity financing 3. Debt financing 4. Mezzanine financing	
	Part 7: Managing financial risks 1. Interest Rate 2. Foreign Exchange Rate 3. Political Risks	
Module methods	Lectures, seminars	
Level	Undergraduate	

	S Cultural Management
ECTS credits	5
Previous knowledge	Knowledge of modules Management Tools and Management Concepts
Module aims	 Students who successfully complete this module are able to: define the term culture and can discuss some of the comparative ways of differentiating cultures describe the concept of cultural values, and relate some of the international differences, similarities and changes occurring in terms of both work and managerial values define exactly what is meant by "organisational culture" and discuss the interaction between national and MNC culture identify and apply the major models of organisational cultures discuss cross-cultural differences and similarities review cultural differences in selected countries and regions, and note some of the important strategic guidelines for doing business in each review examples of verbal communication styles and explain the importance of message interpretation analyze the common downward and upward communication flows used in international communications present the steps that can be taken to overcome international communication problems identify the major dimensions of culture relevant to work settings, and discuss their effect on behaviour in an international environment discuss the value of country cluster analysis and relational orientations in developing effective international management practices examine the impact of globalisation and national responsiveness on international strategic management provide an overview of the nature and degree of multiculturalism and diversity in today's MNCs
Module content	 The meanings and dimensions of culture Comparative management cultures Managing across cultures The effects of culture on strategy and management Intercultural communication
Module methods	Reading material, case studies, video, round table discussions
Level	Undergraduate

S Current Issues in the Global Economy

ECTS credits

5

Previous knowledge Knowledge in micro- and macroeconomics, international economics

Module aims The students have a broad and integrated knowledge and comprehension of the present developments in the global economy. They know the reasons for these developments and the currently discussed proposals for further developing the world economy.

They are able to reflect on the current developments in the global economy using the relevant theories and concepts. They are able to understand and discuss the current developments with regard to the historical perspective.

The students are able to analyze the current developments in global economy by using the relevant data. They can hypothesize about possible misdevelopments and are able to adopt a critical viewpoint when evaluating the currently discussed and favored solutions.

They can present verbally or in writing the results of their analyses and thereby show the significance of the results.

Based on their knowledge and their assessment of the current developments in the global economy, students can deduce the consequences for certain decisions for the company from the multinational and national acting.

- Module content
 1. Basics of international economics and trade theory and policy (introduction or repetition)
 - 2. Elements of globalisation processes
 - 3. International competitiveness
 - 4. International comparison of locations
 - 5. Use of national and global environmental goods
 - 6. World trade order
 - 7. International finance and monetary order
 - 8. Regional dimension of the global economy: developing countries
 - 9. Regional dimension of the global economy: transition countries

10. Regional dimension of the global economy: EU and eastern expansion

Module methods Lecture, group work, case studies, seminars, term papers and presentations, simulation games

S Enterprises and Globalization	
ECTS credits	5
Previous knowledge	Knowledge in international economics
Module aims	The students are able to recognise the significant challenges for companies which work internationally and are able to describe typical action strategies of companies and understand their logic.
	They can clarify on the basis of case study examples to recognise the world-wide trade relationships from stylised facts (equilibrium/ disequilibrium), name their possible causes and assess the potential consequences for the national economic and microeconomic activity.
	The students have a critical understanding of the world-economic order and its institutions, and recognize the significance of international legislation and treaties for decisions made by companies operating globally.
Module content	 Foundations of international management Determinants of internationalization Basic management needs in international companies Function-related international management Risk management for companies working internationally Regional and cultural dimensions in international management
Module methods	Lectures, seminars, case studies, role plays, group work
Level	Undergraduate

S Global Economics		
ECTS credits	5	
Previous knowledge	Sound understanding of the principles of economics, module is almost identical to International Economics in English and German (= Außenwirtschaft) so that only one of these three subjects may be chosen and 5 ECTS credits are given only once.	
Module aims	The module shall enable students to understand the process of globalisation, to understand the implications for society and the business sphere in particular. Students will gain an understanding for policy options available both for macroeconomic and microeconomic responses.	
Module content	 Trade theories Trade policy Fundamentals of international monetary economics Macroeconomic policy in the open economy Issues in world monetary arrangements European integration and other regional integration experiences Analysis of selected markets 	
Module methods	Lectures, seminars, assignments, presentations, group work, role plays	
Level	Undergraduate	

S Global Marketing Management

ECTS credits

Previous knowledge Basic knowledge of marketing

5

- **Module aims** Students acquire a foundational understanding of the instruments in the areas of products, pricing, communication and distribution. They are familiar with current concepts and processes used in practice. They are also able to appreciate all aspects correctly, also in an international context, and make decisions appropriate to the situation; to make decisions in individual instrumental areas or in connected areas on the advantages of individual measures; to differentiate complex connections and cultural features in presentations and small groups and present them in a target-orientated way; and to work in marketing departments of a variety of companies, in different sectors and numerous cultural areas due to their knowledge of operative marketing.
- Module content1. Marketing planning process
 - 2. Market research
 - 3. Product performance (product and price)
 - 4. Profile performance (communication)
 - 5. Presence performance (distribution)
 - 6. Marketing mix in a variety of situations

All areas will address the peculiarities existing within the international context.

Module methods Lectures, case studies, guest lectures, self-study

S International Economics		
ECTS credits	5	
Previous knowledge	Knowledge of modules Principles of Economics or Microeconomics or Microeconomic Theory and Policy; Macroeconomics would be an additional advantage.	
Module aims	Students who studied successfully know the key questions and concepts of international economics (like gains from trade and determinants of exchange rates) as well as international policy instruments.	
	They are able to identify winners and losers of international trade and monetary interactions and to evaluate consequences of state interventions.	
	The students develop an understanding of foreign trade and monetary dependencies of national economies and can evaluate international economic policy proposals.	
	They develop their skills in arguing for or against contentious economic policy measures and, in doing so, learn how to integrate different perspectives.	
	The students are able to apply economic instruments to international economic issues and to develop own approaches to solving a problem.	
Module content	 Free trade vs. autarky Protectionism, especially tariffs Integration stages: free trade area, custom union, common market Balance of payments Exchange rates, especially determinants Exchange rate regimes: fixed vs. flexible exchange rates, relevance of central banks, currency unions Trade policies and monetary policies European aspects Multilateral institutions: IWF and WTO 	
Module methods	Lectures with exercises, current and historical case studies	
Level	Undergraduate	

S International Human Resource Management

ECTS credits 5 Previous knowledge Knowledge of module Human Resource Management and Legal Systems Module aims Students are able to explain various approaches of international human resource management, cultural differences as well as the distinctive features of international human resource management. They are able to critically reflect on example cases from the field of practice and select alternative courses of action. Students have an advanced knowledge of special international characteristics of recruitment, selection, the deployment and development of personnel and incentive structures. For case studies from the field of practice students are able to develop suitable overseas assignment programs and to compile appropriate elements for international human resource selection. Students are able to critically analyze overseas assignment situations which have arisen in practice as well as international human resource management strategies. They can also present suggestions for improvement/ways of solving the issues. Within exemplary cases students recognize the connections between intercultural challenges, strategies for deployment of personnel, management situations and organisational framework. They are able to modify selection procedures, staff development programs and overseas assignment strategies in order to optimise international deployment of personnel. **Module content** 1. International companies and international human resource management 2. Cultural differences Human resources planning in international companies 3. 4. International personnel selection and recruitment Socialization in international companies 5. 6. Cross-border deployment of staff Personnel development and career planning in international 7. companies 8. Employee appraisal and performance appraisal in international companies Determination of international remuneration 9. 10. Cross-cultural teams 11. International industrial relations 12. Demands on HR specialists in international companies Lectures, group work, role plays, self-awareness exercises, case Module methods studies, group presentations Level Undergraduate

S International Logistics		
ECTS credits	5	
Previous knowledge	Knowledge of module Marketing and Logistics	
Module aims	The module gives a detailed overview about the strategies, systems, processes and structures in international logistics. Based on the knowledge of the Module "Marketing and Logistics" the functions, the design as well as the management of international logistics activities on the level of the material and the information flow will be dealt with in detail.	
	Students had a far-ranging knowledge of international logistics. They know the main theories, concepts and methods and they are aware of the development and changes in knowledge and understanding referring to international logistics.	
	They could understand and evaluate the concepts, methods, processes and systems in international logistics.	
	They could apply the learned methods and concepts, so that they are able to plan, control and accomplish an international supply chain.	
	They could use the concepts and methods of international logistics, in order to describe and present logistical problems in an adequate way.	
	They apply their skill and distinctive competencies and handle strategies and methods in a professional way.	
Module content	 Functions in International Logistics Design of International Supply Nets Management of International Logistics International Logistics Provider 	
Module methods	Lectures, illustrations/case studies, self-study, working in teams, presentations	
Level	Undergraduate	

S Logistics Management		
ECTS credits	5	
	5	
Previous knowledge	Knowledge in marketing and logistics	
Module aims	The students have a far-ranging knowledge of logistics management. They know the main theories, concepts and methods and they are aware of the development and changes in knowledge and understanding referring to logistics management.	
	They can understand and evaluate the concepts, methods, processes and systems in logistics management.	
	The students can apply the learned methods and concepts, so that they are able to plan, control and accomplish logistics management.	
	They are able to use the concepts and methods of logistics management, in order to describe and present logistical problems in an adequate way.	
	They can apply their skill and distinctive competencies and handle strategies and methods in a professional way.	
Module content	 Functions in logistics management Strategic and operative logistics management Inventory management Demand forecast Network planning (facilities) Development trends and tendencies in logistics management 	
Module methods	Lectures, illustrations/case studies, self-study, group work, presentations	
Level	Undergraduate	

S Management Accounting		
ECTS credits	5	
Previous knowledge	Knowledge of module Accounting. No prior placement test required by visiting and dual degree students.	
Module aims	Controlling and management accounting are management instruments to provide managers with information in order to make decisions. It is based on financial records and internal data gathered by the business. Students majoring controlling are supposed to understand the role of controlling and the main concepts and methods. The controlling class is based on accounting theory, management accounting principles and case studies of international companies. This subject meets international standards of teaching managerial accounting.	
Module content	 Financial performance management EPS Managers' perspective of accounting (cost center, profit center, value chain, BSC, risk management) Cost concepts Reporting Manufacturing accounting Cost allocation Cost systems (job order costing, process costing) ABC/ABM Cost behavior CVP analysis Budgeting Standard costing and variance analysis Capital budgeting (time value of money, present value concept) Accounting for investments 	
Module methods	Lectures, tutorials, international case studies	
Level	Undergraduate	

S Principles of Event Management		
ECTS credits	5	
Previous knowledge	Not defined	
Module aims	 The students who successfully complete this module know the different types of events as well as the responsibilities of key players within the industry. gained insights into the regional economic impact of events (particularly for Germany). are familiar with the peculiarities of events as services and forms of live communication and the effects on quality Management. understand project management as an important basis for successful events. 	
	 They can critically discuss and evaluate economic, environmental and social impacts of events. name and assess chances and risks of different events as well as related consequences. 	
	 The students can apply important project management methods and tools. develop and assess event budgets. 	
	They can demonstrate effective communication and team working skills.	
	They are able to identify, determine and assess successful management structures and decision-making processes.	
Module content	 The event market (with a focus on business events) Introduction Exhibitions and trade shows Association events Acorporate events Corporate events, sports and leisure events Mega events, sports and leisure events Event sponsoring Regional economic impacts of events Sustainable events Trends in event management Managing events Management of services 	
	2.2. Quality management2.3. Project management	
Module methods	Lectures, case studies, group work	
Level	Undergraduate	

S Procurement and Production Management: Procurement and Production Logistics

ECTS credits

5

Previous knowledge Basics of logistics, motivation for production supply

Module aims This module shall provide general knowledge on the supply of a production facility with all the goods needed starting with the procurement of those from external partners. The students shall:

- get to know to the system elements of modern procurement and production logistics concepts and their interrelations
- learn about the pros and the cons of the procurement and production logistics concepts in order to be able to select them suitably for a given scenario
- critically evaluate the procurement and production logistics concepts in respect to their effect on efficiency and sustainability
- test simple tools to support the procurement and production logistics concepts
- Module content 1. Introduction
 - 1.1 Basics of Procurement Logistics
 - 1.1.1 Definition
 - 1.1.2 Tasks
 - 1.1.3 Elements
 - 1.2 Basics of Production Logistics
 - 1.2.1 Definition
 - 1.2.2 Tasks
 - 1.2.3 Elements
 - 2. Procurement Logistics
 - 2.1 Planning in Procurement Logistics
 - 2.1.1 Sourcing strategies
 - 2.1.1.1 Outsourcing
 - 2.1.1.2 Global Sourcing
 - 2.1.2 TDL ("Teiledifferenzierte Logistikoptimierung")
 - 2.1.3 Simulation
 - 2.1.4 Prognosis
 - 2.2 Warehouse concepts
 - 2.2.1 Warehouse strategies
 - 2.2.2 Warehouse components
 - 2.2.3 Warehouse management
 - 2.3 Optimization in Procurement Logistics
 - 2.3.1 Consolidation
 - 2.3.2 Cooperation
 - 2.3.3 Logistics service provider
 - 2.4 International transport (systems)
 - 2.4.1 Transport by sea
 - 2.4.2 Transport by air
 - 2.4.3 Intermodal transport
 - 2.5 Packaging
 - 2.5.1 Taxonomies
 - 2.5.2 Components in packaging
 - 2.5.3 Labelling

- 2.6 Communication systems
 - 2.6.1 Business application for communication systems
 - 2.6.2 Data transfer techniques
 - 2.6.3 Data capturing
 - 2.6.4 Encoding of data
- 3. Production Logistics
 - 3.1 Material Supply Systems in Production Logistics
 - 3.1.1 Transport in Production Logistics
 - 3.1.2 Storage and Buffers in Production Logistics
 - 3.1.3 Production Control Station Concept (PLL)
 - 3.1.3.1 Control Station Concept
 - 3.1.3.2 Control cycles / cybernetic models
 - 3.1.3.3 Data warehousing
 - 3.2 Production management systems
 - 3.2.1 Lean manufacturing
 - 3.2.2 TPS
 - 3.2.3 Just in time / Just in sequence
 - 3.2.4 Scheduling and sequencing
 - 3.2.4.1 Job shop
 - 3.2.4.2 Flow shop
 - 3.3 Production control systems
 - 3.3.1 KANBAN
 - 3.3.2 CONWIP
 - 3.3.3 MRP / MRP II
 - 3.3.4 "Fortschrittzahlen" concept
 - 3.4 Maintenance
 - 3.4.1 Basic forms of maintenance
 - 3.4.2 Risk assessment
 - 3.4.3 TPM
- Module methods Lecture with activating elements and exercises, homework (various tasks)

S The International Event Market

ECTS credits 5

Previous knowledge Not defined

Module aims The students who successfully complete this module understand the international event market, including its key players and stakeholders.

They can

- identify the main event types and categories.
- demonstrate a critical understanding of key socio-cultural, political, economic and environmental event impacts and their consequences.
- distinguish event legacies from event impacts and identify positive and negative legacies of major events.
- explain the role of events for national, regional and local economies, international tourism and destination marketing.

The students are able to

- identify and analyze international, national and local issues that impact on organized events.
- identify key event stakeholders and analyze their responses to contemporary event issues.
- develop and discuss strategies to effectively address and manage contemporary event issues applying relevant literature.

The students can demonstrate effective communication and team working skills.

They can suggest solutions on how to deal with complex negative event impacts and legacies as well as contemporary issues faced by events.

Module content - Introduction: the international event market

- Key players in the international event market
- Event types and forms
- Events in a globalized world: organizing and managing events for diverse target groups and different cultural backgrounds
- Event impacts and legacies
- The role of events for tourism, destination marketing and local, regional and national economies
- Contemporary issues in event management
- Module methods Lectures, group work, individual and group presentations, case studies

POSTGRADUATE MODULES

Taught in English in the degree program:

M.A. International Business and Management

In alphabetical order (specializations at the end):

Advanced Management Accounting **ECTS credits** 5 Previous knowledge Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR). No prior placement test required by visiting and dual degree students. Module aims Students who successfully complete this module understand the general relevance of management accounting in preparation for management decisions. They also will be able to: learn about the various methods of management accounting in such detail that they can assess the limits of these methods. apply advanced methods of management accounting to concrete problems. They are able to use EXCEL for problems within management accounting in the way it is used in practice in the area of controlling. prepare and explain the results of analyzes by means of management accounting so that those working outside of controlling are able to understand the decision-making situations. assess ongoing processes in an enterprise's system in monetary terms and know how individual issues within the entire system can be isolated for evaluation purposes. They are able to analyze value flows between different elements of an enterprise's system. **Module content** 1. Management accounting supporting value-oriented management decisions 2. The concept of relevant costs 2.1 Cost behavior and cost volume relationships 2.2 Historical and relevant costs 3. Measurement of cost behavior 4. Costing of processes (case study in Excel) 4.1 Process modelling especially modelling of logistical processes 4.2 Process costing 5. Budgeting 5.1 Budgets and overall goals 5.2 The systems of budgeted controlling objects 5.3 Budgeting of production 5.4 Budgeting of service functions

- 5.5 Capital budgeting
- 5.6 Project budgeting
- 6. Controlling the budget
 - 6.1 Controlling of production
 - 6.2 Controlling of service functions
- 7. Product costing (case study in Excel)
- 8. Connectivity of cost accounting and financial accounting
- 9. The contribution of management accounting to financial control of enterprises
- Module methods E-learning, small case studies, integrated case studies in Excel

Level Postgraduate

	Business Ethics
ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR)
Module aims	Doing good business is not only a matter of being effective, but also a question of values and ethics. While business ethics cannot provide factual knowledge of right and wrong business practices, a sound understanding of business ethics is indispensable for a mature and responsible approach to ethical challenges in doing business.
	After this course, the students know different methods of justifying norms and important delineating criteria for business ethics problems. In addition, they are familiar with basic strategies for operationalizing ethical principles in business contexts.
	They master the differentiation between positive and normative questions, are aware of the normativity of economic and business theories and have a sound knowledge of implementation strategies for business ethical principles.
	The students can employ the acquired business ethical concepts and methods for reflected normative orientation in a variety of concrete business situations across cultures.
	They can explain and justify the systematic status and the practical implications of ethical demands elating to economic actors.
	Adopting the acquired perspectives and methods, they are in a position to give an integrated assessment (i.e. considering aspects of both success and legitimacy) of "conventional" (i.e. purely success-oriented) business objectives with respect to their legitimacy.
Module content	 Foundations of ethics The moral point of view (foundational questions) Normative ethics: derivation of norms Ethics and culture: relativism vs. universalism The practical challenge of bringing ethical norms to bear in the real world Fundamental concepts of business ethics
Module methods	Lectures, presentations, case studies, group assignments
Level	Postgraduate

Global Economic Framework

ECTS credits

Previous knowledge Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), basic knowledge of international economic relations

Module aims Global economic framework conditions decisively shape the freedom of action that companies have in open economies. Rational decisions made by management require that important development trends in the global economy are recognized and that their impact on the options available for companies to take is accurately assessed. This module expands and deepens relevant knowledge of global economic processes and structures.

Students who successfully complete this module acquire a broad knowledge of global economic trends and assessment criteria. They develop the skills to recognize the connections between global economic processes and to creatively apply their knowledge to various problems within the topic of globalisation and corporate action. They will be able to present the results of studies as part of the module and to combine economic and business analysis methods.

Module content 1. World-economic order

5

- 2. World-economic institutions (global governance)
- 3. Causes of world-economic integration (including MNU and foreign direct investments)
- 4. Effects of world-economic integration (including the nation state and globalization; tax competition)
- 5. Technical progress, demographic change and the geopolitical situation
- 6. Competitiveness of national economies and industries
- Module methods Lectures, group work, individual presentation

Level Postgraduate

Human Resource Management in Multinational Companies

ECTS credits

5

Previous knowledge Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), basic overview: Human Resource Management and Legal Systems

Module aims In international businesses human resource management always has an additional level of complexity. In order to handle this successfully it is useful to have an insight in the specific fields and challenges of international human resource management. Moreover, the strategic aspects of international human resource management have to be taken in account in order to be able not only to understand human resource issues and come to decisions of practical relevance.

Students who successfully complete this module are:

- able to recognize human resources issues particularly within the context of companies operating on an international level.
- able to identify connections between decisions affecting human resources policies and business strategies.
- aware of a range of practice-relevant methods for dealing with IHRM challenges.
- able apply appropriate methods for dealing with IHRM challenges.
- are able to develop their own suggestions for dealing with challenges on the basis of suitable methods, and can critically assess and discuss the risks and opportunities involved.
- able to deal appropriately with the complexity and decisions within international companies, and reach their own well-founded decisions.

Module content	 Conception of human resource management Fundamental knowledge of the theory and paradigm formation Strategic and international aspects Fields of activity of international human resource management Personnel selection in international companies Posting employees and (re-)integration International incentive structures and performance appraisal Leadership and motivation in multinational companies Gender-related issues of career and talent management
Module methods	Lectures, group work, role plays, self-awareness exercises, case studies, group exercises and presentations

Level Postgraduate

	International Business Law
ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), basic understanding of private law
Module aims	International business activities are always subject to a legal framework. This course familiarizes students with legal issues that arise specifically in the context of international business transactions, like international sales activities or foreign investments.
	Students who successfully complete this module are familiar with relevant issues of international business transactions, in particular international trade.
	They have a broad knowledge of the basic relevant legal framework of international business.
	They are capable of using their knowledge of international business law to assess practical issues and identify potential risks.
	The students are able to communicate with lawyers and other specialists on a professional level with regard to topics of international business law.
	Students are applying their knowledge to practical cases and are capable of solving certain legal issues.
Module content	 Overview of different legal systems Law of conflicts International sales law, in particular the CISC INCOTERMS Relevance of documents in international trade Handling of transaction risks in international trade International business forms, multinational enterprises International dispute settlement
Module methods	Lecture, self-study, case studies
Level	Postgraduate

International Corporate Finance	
ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), fundamental principles of financial management (Bachelor), basic mathematics (intermediate secondary school level)
Module aims	Students who successfully complete this module are familiarized with the international financial environment, exchange rate behavior and exchange rate risk management.
Module content	Part 1: The international financial environment 1. Multinational financial management: an overview 2. International financial markets
	Part 2: Exchange rate behavior1. Government influence on exchange rates2. International arbitrage and interest rate parity3. Relationships among inflation, interest rates, and exchange rates
	 Part 3: Exchange rate risk management 1. Forecasting exchange rates 2. Measuring exposure to exchange rate fluctuations 3. Managing transaction exposure 4. Managing economic exposure and translation exposure
	Part 4: Long-term asset and liability management 1. Direct foreign investment 2. Multinational capital budgeting 3. Multinational cost of capital and capital structure
Module methods	Lectures, small group work, presentation of group work, case studies
Level	Postgraduate

International Economics and Business

ECTS credits

5

- **Previous knowledge** Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), knowledge of modules Micro- and Macroeconomics, International Economics or European Integration, Enterprise and Globalization
- **Module aims** The module analyzes the (changing) roles of enterprises and countries in the global economy, assimilating the managerial and economic aspects to a holistic perspective. Future managers are equipped with knowledge and analytical skills on how the global economy works, which consolidates their power of judgment in respect of strategic decisions in internationally operating companies.

Students who successfully studied this module know the most important incitements of globalization and can explain their effects onto the structure of the global economy, the scope of action of nations and the strategic options of enterprises.

They have a broad knowledge related to international trade, foreign direct investments, balance of payments and exchange rates. They can identify the winners and losers of globalization processes and estimate their consequences for international companies.

The students can interpret and evaluate the relevant global economic data and statistics to detect the winners and losers of globalization processes and to measure strategic options for international enterprises.

They can critically analyze complex global economic issues and discuss with peers and consultants on a high level. They scrutinize the economic policy of prevalent doctrines and guidelines of politico-economic action, as propagated by the media, in relation to the world economy.

The students acquire the competencies to react appropriately to nonforeseeable requirements in a quickly changing vocational area. They achieve general problem-solving skills in the field of management as regards international challenges.

Module content

- 1. The global economy
- 6. A quantitative analysis of trade and capital flows
- 7. Trade and comparative advantage
- 8. Modern trade theory and the role of the firm
- 9. Trade policy and strategic options of firms
- 10. Realities of international trade and capital flows
- 11. Managing across borders
- 12. Exchange rates
- 13. Currency crisis, financial crisis and the strategic options of firms
- 14. Globalization, inequality and corporate responsibility

Module methods Seminaristic course with integrated case studies and self-study. The students acquire precise knowledge of structure and interdependencies in the global economy by means of selected texts. They analyze their significance for the strategic acting of firms.

Level Undergraduate

International Marketing	
ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), basic knowledge of marketing
Module aims	 Students will know the culturally determined differences in various countries and the increased complexities which arise for product range decisions (4 P's) in an international context. have a detailed, extensive knowledge of the central areas of international marketing. be able to interpret the various models of analysis for international cultures and make them useful for management decisions. be able to work out causes and effects for complex issues in the field of international marketing and present them in an action-orientated way. be able to recognize logical connections, select suitable analysis procedures, and also work out practice-oriented solutions in very diverse, international contexts.
Module content	 Internationalization as a challenge for marketing Terminology and task fields of international marketing International market research International marketing mix a) International product management b) International price management c) International sales management d) International communication management
Module methods	Lectures, case studies, guest lectures, self-study
Level	Postgraduate

	IT and Information Management
ECTS and the	
ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), fundamental principles of information systems and information processing
Module aims	Students who successfully complete this module know about procurement and administration of information essential to the organization and have skills which enable information processing to be planned and secured in the long-term.
	They acquire basic knowledge of the organization of information processing in an operational context. They define the contribution of information processing to business management.
	They also are able to support IT projects, generate management information from data, and develop concepts such as how availability of valuable information can be made possible.
	The students can communicate and represent the contribution of IT to the achievement of corporate goals.
	They can prepare measures required to secure IT operation and support their implementation.
Module content	 Managing information systems Terms and classifications Strategic IT management Operative IT Management I professions Security management Data protection T Legal management Methods and tools of information management Data warehousing OLAP Business intelligence Knowledge management IT controlling and IM controlling Examples from business administration
Module methods	Seminar teaching with project tasks for students
Level	Postgraduate

Managing for Sustainable Success – Business Ethics and Corporate Management

Dusiness Lincs and Corporate Management	
ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR)
Module aims	This module will provide a perspective on the integration of business management and ethical considerations. It will give an insight into the tension, the compatibilities and conflicts of ethical and business decisions.
	The students have a sound understanding of key theories and contributions in business ethics and corporate performance management.
	They are able to go beyond the standard statements in media and public discussions and reflect on the challenges, opportunities and limitations in business practice.
	The students can apply ethical theories. They are able to apply advanced theories and tools and propose solutions for real business problems.
Module content	 Part 1: 1.a. Ethical theories Introduction into ethics Utilitarianism, Kantian ethics and virtue ethics 1.b. Ethics in a market economy framework Market economy and social norms Social capital, solidarity and market economy Limits of markets 1.c. Ethical challenges and the role of information asymmetry Information asymmetry and ethical problems Corporate governance code 1.d. Management approaches to address ethical challenges Corporate Social Responsibility - limits and perspectives Management tools – integrity and compliance; mission statements, codes of ethics, codes of conduct, organizational changes
	 Part 2: 2.a. Financial management and value creation 2.b. Measuring performance and risk 2.c. Sustainable growth – remaining successful in highly competitive and volatile markets On the relevance of incentive systems
	 Part 3: 3.a. Code of ethics, code of conduct and performance requirements – a contradiction in terms? 3.b. Case studies: reviews on good and bad practices How to obtain sustainable success – a field report

Level Undergraduate

ECTS credits

5

- **Previous knowledge** Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), fundamental principles of strategic management, strategy process, management tools, management concepts, strategy evaluation, fundamental principles of controlling, fundamental processes of project and process management
- **Module aims** This course is for future managers who are keen to be involved in the process of strategy in organizations. It covers the strategic analysis, the identification and choice of strategic options and addresses the challenges and pitfalls of implementing strategy. It takes a dynamic and hands on approach through lecture activities and case studies where participants are challenged to think about how to apply strategic frameworks and concepts to their own research work. By the end of the course students should be equipped with the tools and techniques to be effective in thinking and acting strategically.

Students who have completed the module successfully, have a knowledge about principles of strategic management and have revisited tools and concepts of management studied at undergraduate level.

They can

- appreciate the different methods by which corporate strategies are formed as an influence on an organization's decision-making.
- demonstrate awareness of the issues associated with the growth of organizations in order to address problems by integrating the various business functions and respecting the overall context.
- demonstrate awareness of the various strategies and issues associated with operating on a global scale.
- appreciate the issues of growth by mergers, acquisitions and alliances.
- apply information technology tools wherever adequate to underpin your awareness and demonstrate various issues or scenarios.
- communicate essential moves to design and implement change.
- modify behavior to improve performance in strategic leadership
- · apply techniques of strategic analysis in the organization
- appreciate the contribution of the leadership role to strategic direction and modify a company's behavior to improve performance.

Module content 1. A strategy as such and the strategy in particular

- what strategy is and what a manager has to do
- how to formulate strategy and how to implement it
- 2. Forces having an impact
 - the various lenses, the role of the organizational structure and the influence of technology
 - cooperation and concentration
 - globalization and values

	 3. Contexts of strategic planning, processes and implementation strategies at work in start-ups and mature enterprises how to manage experts, innovation and diversity and how to differentiate 3.1. Turnaround/change management, innovation management, internationalization 3.2. Project-oriented development and implementation of business strategies
	4. Summary assessment of strategic management
Module methods	Lectures, reading material, case studies, video, round-table discussions
Level	Postgraduate

	Value Chain Management
ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR)
Module aims	The students know the basics of value chain management and they understand the connections between the relevant economic functions.
	They have the capability to understand the potentials of efficient value chains and to define the contribution of value chain management to the company success.
	The students have acquired the basic methods for designing the value chain and can apply these methods in the particular context.
	They can identify the pros and cons in the configuration and operation of value chains and can argue appropriate structures and optimizations in an adequate way.
	The students have the capability to integrate the value chain into the context of business management in international supply chains and are able to analyze the relationship to business partners.
Module content	 Introduction Definition and approaches to value chain management: SCM, value + value chains Group studies: What is the right value chain for your product? How to match supply and demand: RE Matching the numbers: the need for inventory, inventory management Group studies: The hidden effects of inventory How to cope with uncertainty? Agile supply chains Group studies: forecasting and agility in value chains Efficiency driven supply chains Group studies: analyzing the Toyota production system Sustainability in value chains Group studies: sustainable value chain analysis Review and poster presentations
Module methods	lecture, presentation, group studies
Level	Postgraduate

S Consulting: Case Studies

ECTS credits

5

- **Previous knowledge** Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), knowledge of modules Management Tools and Management Concepts, fundamental knowledge of controlling and finances
- **Module aims** In this lecture approximately five to six comprehensive cases are solved in changing teams during the semester. All teams shall present their case solutions in class. Before each case study, some of the theoretical basis needed for the case is taught/repeated in a lecture and then needs to be rehearsed and broadened by the teams in own literature and case related research.

Students learn about consulting procedures of external consultancy firms and in-house consulting teams. The relevant procedures and methods from the fields of strategic management, marketing and the accompanying support from controlling and finance are learnt on the basis of case study examples, and the possible ways to apply them are assessed.

They have deepened the knowledge how to approach and successfully solve cases.

The students learn how to reduce complex business situations to a minimal number of decisive problems which need to be solved. They can apply relevant methods for problem solving.

They are able to reasonably argue and justify their standpoint in a cooperative and team oriented way.

The students can transfer the learned approaches to various business situations.

- Module contentAll case studies cover:

 1. Range of tasks/fields of application of management consultancy

 2. Problem-solving methods of management consultancy

 3. Management and supervision of strategy and consulting projects

 4. Selection between strategic options and their consequencesModule methodsLectures, exercises, literature research, case studies
- Level Postgraduate

S Consulting: Consulting and Management

ECTS credits

5

- **Previous knowledge** Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), knowledge of modules Management Tools, Management Concepts, fundamental principles of controlling and finances, fundamental principles of project and process management
- Module aims The module aims to introduce the students to the various consulting markets and services. The students will learn that all consulting follows a distinctive process that is needed to deliver successful business projects. Participants will get to know typical consulting tools and techniques used for operational improvements and strategy development.

Students who successfully complete this module have a substantiated knowledge of the consulting process and the most important management and marketing tools with regard to strategy development and implementation in business practice.

They know how consulting companies function, how they set up projects for their clients and how they help client companies to compile strategies for their business as a whole, or for sections of it, and how these can be implemented in practice.

The students are able to work confidently with management and marketing tools.

They can analyze strategic issues, and interpret and present the results. They will learn to deliver MECE arguments (mutually exclusive and collectively exhaustive) and prepare convincing presentations.

The students are able to consolidate information from different areas of a business and the business environment and analyze it.

Module content

- 1. Introduction
 - 1.1 Nature of consulting
 - 1.2 Consulting market and consulting firms
- 2. Structures in consulting firms and careers in consulting
- 3. The consulting process
 - 3.1 Initial contact
 - 3.2 Proposal phase
 - 3.3 Pitch situation
 - 3.4 Project set-up and project plan/charter
 - 3.5 Project team
 - 3.6 Working with the client
- 4. The analysis phase
 - 4.1 As-is analysis

	4.2 Development of to-be scenarios
	4.2.1 Using management tools
	4.2.2 Evaluating client capabilities and business opportunities
	4.3 Leading strategic change
	5. Presenting the results
	5.1 Communication
	5.2 Pyramid thinking
	5.3 Say it with charts
	6. Closing the project
	6.1 Transferring the project
	6.2 Lessons learned
	6.3 Knowledge management
Module methods	Lectures, exercises, case studies, group work, presentations
Level	Undergraduate

S Consulting: Controlling and Finance Tools for Consultants

ECTS credits

5

Previous knowledge Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), knowledge of modules Management Tools and Management Concepts, fundamental knowledge of controlling and finances, fundamental principles of project and process management

Module aims What can external or internal consultants contribute to companies? How can these contributions be measured and communicated? Students are able to critically evaluate the complex decision-making processes within companies in view of the consultants' contribution to the achievement of financial business targets and present the added value of a project for the company.

Students will have a substantiated knowledge of the most important tools of controlling and of corporate finance used for the improvement of business performance as an approach for consultancy services.

They are able to work confidently with key finance and controlling tools.

They can analyze operative issues in view of their financial implications, and interpret and present the results.

The students are able to consolidate information from different areas of a business and the business environment, analyze this information and develop it to the decision-making stage.

Module content 1. Principles of business objectives

- Shareholders vs. stakeholders
- Financial control parameters
- Principles of value management
- 2. Value management
 - Investment management
 - Corporate assessment
 - Approaches of value management
- 3. Selected measures to enhance shareholder value
 - Make or buy? M&A management
 - · Working capital management
 - Financial instrument
 - Instruments of risk management
- Module methods Lectures, exercises, literature research, case studies

Level Postgraduate

S Doing Business in International Markets: Project/Case Study

ECTS credits

5

Previous knowledge Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), knowledge of modules Global Business and Current Trends in International Markets

Module aims The project will provide with an opportunity to analyze a self-chosen subject within an overall topic specifically chosen for each year and apply key concepts used in management and economics. The project will encourage students to do specific projects in multinational groups. By emphasizing project work, teamwork and international dimension, the module is meant to prepare students for the master thesis.

Students will apply the theoretical knowledge previously learnt in a new context. This enables them to see the potential (and limits) of sound theoretical reasoning. Students will sharpen their skills at working in teams, at dealing with difficulties in intercultural teams.

Module content The content depends on the overall topic chosen for the project. The overall topic shall be selected in close cooperation with the advisory group for the study program. Possible topics would be:

- 1. Dealing with environmental challenges enterprises finding innovative solutions
- 2. Multinational enterprises in Asia challenges and perspectives
- 3. Human resource management in European countries
- 4. Promoting innovation best practices in Europe
- **Module methods** Group work, presentations, role plays

Level Postgraduate

S Innovation and Transformation: Innovation and Entrepreneurship

ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR)
Module aims	Basic concepts, strategies and success factors of innovation and entrepreneurship. The lean management concept will be introduced and applied. Existing business models will be examined. New business models will be developed by the students following the lean start up method.
	Students have a sound understanding of different innovation concepts which have been discussed in the modern business and economics literature.
	They have a sound understanding of the role of entrepreneurship in economic development and the hurdles entrepreneurs typically face.
	They are able to translate their theoretical knowledge into a practical proposal for a business creation.
	The students can use their competencies in finance, accounting and marketing and apply it to their unique case study.
	They are able to discuss in groups their ideas, their reflection of opportunities and weigh arguments.
	The students can present their ideas to others and convince them about the attractiveness of their idea.
	They are able to see their project in the context of the business environment and reflect on the perspective of banks, promotion agencies, city governments, potential employees.
Module content	 Innovation Management Success Factors for Innovations Science-based approaches to generate innovation developments Creating and identifying Innovations Concept and Product Developments
	 Entrepreneurship: Implementation of Innovations Lean Start up Method Business Canvas Business Cases
Module methods	Concepts are introduced, discussed and applied in case studies (business models) created by students.
Level	Undergraduate

S Innovation and Transformation: Operations Management

ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR)
Module aims	The aim of this module is to introduce to a broad range of operations management concepts, within the context of change management and transformation. In addition to introductory sessions which explore the characteristics of operations management strategy and systems, a number of areas provide the framework for study:
	 Process design including product/service, process, supply chain, layout and flow, and job design Planning and control including capacity, JIT/lean and quality, Thematic change programmes/philosophies
	Students who have completed the module successfully, have a knowledge about principles of operations management in the context of innovation and change. They understand the major theories, concepts and practices of operations management and are able to analyse the effectiveness of operations management practices in a wide range of organisations and sectors (manufacturing, service and public sector).
	The students demonstrate a deep understanding of theoretical principles through application to organisational problems. They are able to analyse and challenge organisational practices using systems concepts and have a deep knowledge in using the principles of operations management in the context of innovation and change.
	The students can work confidently with operations management tools.
	They are able to analyze operation issues, and interpret and present the results. They will learn to deliver MECE arguments (mutually exclusive and collectively exhaustive) and prepare convincing presentations.
	The students are able to consolidate information from different areas of the internal business process and analyze it.
Module content	 Foundations 1.1 Operations management, innovation and transformation 1.2 Operations strategy 1.3 Operations performance Operations management – design 2.1 Process design and technology 2.2 Layout and flow Operations management – planning and control 3.1 Capacity planning and control 3.2 ERP/MRP, lean synchronisation and TQM

- Operations management improvement
 Summary
- Module methods Exercise, seminaristic course
- Level Undergraduate

S Innovation and Transformation: Organizational Transformation Case Studies

ECTS credits	5
Previous knowledge	Knowledge of international business, strategic management and management concepts.
Module aims	The students identify how issues of structure, culture, power, politics, leadership and learning can be used to understand and manage change in MNEs.
	 The students get a deeper understanding of planned and emergent transformational change. reflect the sources of organizational culture and the influence of national culture in business transformation.
	 They can analyze a business case in a systematic way. differentiate between immediate and basic issues (importance and urgency) and causes/effects. are able to identify constraints and opportunities in complex business transformation processes. use qualitative and quantitative analysis to draw appropriate conclusions and find solutions.
	 The students interpret and explain the impact of different solutions on business performance, culture and employees in specific settings (e. g. sectors, countries). are able to explain decision criteria and reasons for suggested solutions.
	 They are able to draw conclusions and develop concepts for organizational transformation. critically reflect strengths and weaknesses of a strategy and case solutions.
Module content	 The following topics are dealt with in case studies: Corporate leadership Organizational cultures International aspects of organizational transformation Power and politics in transformation processes Strategic decision-taking Reorganization of top management structures Crises management and corporate restructuring Acquisition and integration of business ventures/entities Joint ventures Strategic alliances and networks

Module methods The lecture is mostly held in a seminaristic manner. The lecture parts serve to introduce to the topic, incl. the theoretical concepts and methods, as well as to prepare discussions, case studies and group work.

Level Postgraduate

S Strategic Marketing: Product and Innovation Management

ECTS credits	5
Previous knowledge	Bachelor's degree in Business Management/Economic Sciences or 180 ECTS credit points from previous studies respectively, ability to study in English (min. B2 CEFR), basic knowledge of marketing
Module aims	The students learn typical processes of new product development in different sectors and with different degrees of innovation. They receive fundamental information on methodical instruments (empirical analysis methods, creativity techniques, screening procedures, concept and product test, marketing mix tests, forecasts, diffusion models). The students understand an innovation process as a complex management task.
Module content	 Innovation as a central management task Concept of phases at a glance Innovation processes in different areas Empirical analysis methods Launch plan and diffusion models Pricing of innovations
Module methods	Lectures, case studies, self-study, guest lectures
Level	Postgraduate
